To Whom it May Concern

I did not submit a paper to the January 8-10<sup>th</sup> 2004, Chennai, India, ICFRC International Conference on Fibre Composites, High Performance Concretes and Smart Materials as I only found out about it at short notice. I did however give a presentation at short notice about TecEco cements (see Conference presentations)

Note that the science of TecEco binders is continuously evolving and we have more recently determined that the carbonates formed are an amorphous phase, lansfordite and nesquehonite.

John Harrison
